Netlabs ITS

Quality Gives Confidence

Differentiators

- **Focus on the Project as a Business Approach** – Our background is in IT and Management consulting and we use SAP and other cutting edge technologies as a tool to help organizations realize their business objectives.
- **Fixed Fee and Schedule** – Netlabs ITS has completed all of its projects on a fixed fee and schedule and has not asked its clients for change requests.
- **Industry Focus** – Our consultants focus on our client's business, and our clients do not need to spend resources bringing our team “up to speed” on the business.
- **Senior Team working together** – We staff the project with senior level consultants that have worked together on other projects. This approach ensures the best solution for the customer and ensures that we have a tightly integrated solution. Since the consultants have worked together, no requirements will be missed or inconsistent with related functionality.
- **Broad Project Experience in India & the United States** – Netlabs ITS has completed numerous projects in India and the United States, so we understand the localized business needs and governmental risk and compliance factors involved with software implementations and consulting services.
